

Retell AI – Topic 1 Assessment Documentation

Project: AI Customer Support Voice Agent

Platform: Retell AI

Agent: AI Customer Support Agent

Agent Type: Single-Prompt Agent

1. Project Overview

This project demonstrates the creation, configuration, and testing of a basic customer-support voice AI agent using Retell AI. The agent is designed for a short natural voice conversation: greet the caller, understand a simple request, provide a concise general answer, and politely end the call.

2. Agent Configuration

Setting	Configuration
Agent Name	AI Customer Support Agent
Agent Type	Single-Prompt Agent
Model	GPT 5.6 Terra
Voice	Cimo
Language	English (US)
Welcome	AI speaks first with a custom welcome message
Function	End Call

3. Agent Prompt

Identity: AI customer support assistant for a demonstration voice call.

Conversation flow:

1. Greet the customer and ask how you can help.
2. Understand the request and ask one short clarification question when necessary.
3. Answer simple general questions clearly, briefly, and conversationally.
4. When the customer is finished, thank them and end the call politely.

The agent avoids inventing company policies, prices, orders, account information, or other unsupported facts, and uses plain language suitable for a voice conversation.

4. Welcome Message

Hello! Welcome to our customer support service. I'm your AI assistant. How can I help you today?

5. End Call Function

The End Call function is configured to trigger when the user indicates that the conversation is finished, for example by saying "thank you, that's all" or "goodbye."

6. Test Conversation

Speaker	Example
User	Hello, I want to know what services you provide.
User	Can you explain that briefly?

User	Thank you, that's all I need.
------	-------------------------------

7. Evidence / Deliverables

Screenshots should cover the agent configuration, prompt, welcome message, End Call function, and the completed test call/call history. The Loom demonstration should show the configuration and the single actual Web Test Call, followed by transcript and available call-performance details.

8. Loom Demonstration

Loom video: <https://www.loom.com/share/b4287c142d594016a94ff93b4bf0553f>

9. Completion Checklist

- Retell AI account/workspace created
- Dashboard explored
- Single-prompt voice agent created
- LLM/model configured
- Voice and language configured
- Welcome message configured
- End Call function configured
- One Web Test Call completed
- Transcript reviewed
- Call performance/latency reviewed
- Loom demonstration recorded
- Documentation prepared

Note

This documentation is intended for the Topic 1 LMS submission. Replace or supplement the checklist/evidence with the actual screenshots and final call details from the completed Retell call before submission.
